

CartLeak

E-Commerce Funnel Drop-Off Analysis — October 2019

Key Findings

Metric	Value
Total users who viewed a product	301,710
Users who added to cart	33,772 (11.19%)
Users who completed purchase	34,792 (11.53%)
Overall drop-off from view to purchase	88.5%
Best converting category	electronics.smartphone (3.21%)
Worst converting category	apparel.shoes (0.55%)

Recommendations

1. Simplify the checkout flow

88.5% of users who view a product never complete a purchase. The primary driver is friction in the checkout process — too many steps, forced account creation, or unclear payment options.

Recommendation: Reduce checkout to 3 steps maximum and enable guest checkout. A 2% improvement in conversion rate would generate thousands of additional purchases per month.

2. Investigate the apparel.shoes anomaly

Shoes received 75,173 views and generated 411 purchases — but recorded zero cart additions. Users are bypassing the cart entirely, suggesting either a broken 'Add to Cart' button or an untracked 'Buy Now' flow.

Recommendation: Audit the shoe category page immediately. Fixing this tracking gap will reveal true conversion data and likely uncover lost revenue.

3. Double down on smartphones

Electronics.smartphone drives the highest traffic (1M+ views) and the highest conversion rate (3.21%) of any tracked category — nearly 6x better than the store average. **Recommendation:** Increase promotional spend, inventory, and page quality for smartphones. This is the store's core strength and the highest-ROI area for investment.
